

CLAIMS

What is claimed is:

pub
a17

1. A vertical surface mount semiconductor device, comprising:
a semiconductor device;
5 a plurality of bond pads disposed on a surface of said semiconductor device adjacent an edge thereof; and
conductive bumps disposed adjacent selected bond pads, each of said conductive bumps configured to form a conductive joint between one of said selected bond pads and a corresponding terminal of a substrate upon positioning said semiconductor
10 device substantially vertically relative to said substrate.

2. The vertical surface mount semiconductor device of claim 1, wherein a conductive bum is disposed adjacent each of said plurality of bond pads.

3. The vertical surface mount semiconductor device of claim 1, further comprising a support layer.

4. The vertical surface mount semiconductor device of claim 3, wherein said support layer is disposed on another surface of said semiconductor device.

5. The vertical surface mount semiconductor device of claim 1, further comprising a support footing formed adjacent said edge.

6. The vertical surface mount semiconductor device of claim 5, wherein said support footing is disposed on another surface of said semiconductor device.

7. The vertical surface mount semiconductor device of claim 5, wherein said support footing is disposed on said surface of said semiconductor device.

8. The vertical surface mount semiconductor device of claim 1, further comprising a laminate which connectively bonds said semiconductor device to an adjacent semiconductor device.

5 *Sub A21* 9. A vertical surface mount semiconductor device, comprising:
a semiconductor device;
a plurality of bond pads disposed on a surface of said semiconductor device adjacent an
edge thereof, selected bond pads of said plurality of bond pads having conductive
bumps adjacent thereto, said conductive bumps configured to form a joints
10 between said selected bond pads and corresponding terminals of a carrier substrate
upon substantially perpendicular orientation of said semiconductor device on said
carrier substrate; and
a support member, at least a portion of which is disposed proximate said edge of said
semiconductor device.

15 10. The vertical surface mount semiconductor device of claim 9, wherein said
support member is selected from the group consisting of support footings and support
layers.

20 11. The vertical surface mount semiconductor device of claim 9, wherein said
support member is disposed on another surface of said semiconductor device.

25 12. The vertical surface mount semiconductor device of claim 9, wherein a
conductive bump is positioned adjacent each of said plurality of bond pads.

Sub A31 13. A chip-on-board assembly, comprising:
a substrate with a plurality of terminals;
a semiconductor device configured to be positioned substantially perpendicularly relative
to said substrate, said semiconductor device having a plurality of bond pads on a

surface thereof, each of said plurality of bond pads being located adjacent an edge of said surface; and
electrically conductive joints configured to be disposed and to establish communication between selected bond pads and corresponding terminals.

5

14. The chip-on-board assembly of claim 13, wherein each of said plurality of bond pads has an electrically conductive joint disposed adjacent thereto.

sub 941

10

15. The chip-on-board assembly of claim 13, further comprising a support member in contact with at least one of said semiconductor device and said carrier substrate.

16. The chip-on-board assembly of claim 15, wherein said support member is selected from the group consisting of support footings and support layers.

15

17. The chip-on-board assembly of claim 15, wherein said support member is disposed proximate said edge of said semiconductor device.

20

18. The chip-on-board assembly of claim 13, wherein said semiconductor device is laminated to an adjacent semiconductor device.

sub 951

25

19. A computer including a vertically mountable semiconductor device, the semiconductor device comprising:
a semiconductor die with a plurality of circuit traces;
a plurality of bond pads disposed on a surface of said semiconductor die proximate an edge thereof, each of said plurality of bond pads communicating with one of said plurality of circuit traces; and
conductive bumps in communication with selected bond pads, said conductive bumps each configured to form a joint between one of said selected bond pads and a

corresponding terminal of a substrate when said semiconductor device is positioned substantially perpendicularly relative to said substrate.

5 20. The computer of claim 19, wherein each of said plurality of bond pads has a conductive bump in communication therewith.

 21. The computer of claim 19, wherein said semiconductor device further comprises a support member.

10 22. The computer of claim 21, wherein said support member is selected from the group consisting of support footings and support layers.

 23. The computer of claim 21, wherein said support member is disposed proximate said edge.

15 24. The computer of claim 19, wherein said semiconductor device is laminated to an adjacent semiconductor device.
